DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claims 1-3, it is not clear what is the statutory class for the claimed subject matter. The claims refer to a system, which are typically an apparatus class (see claims 4-7 which are system claims that recite structural elements), however, claims 1-3 recite method steps rather than structural elements. The examiner presumes that claims 1-3 are intended to be method claims. If this interpretation is incorrect, applicant should clarify their intention as to the proper statutory class -- apparatus or method.

Claim 1, line 5, it is not clear whether "repeating modulated" should be --repeatedly modulating--.

Claim 1, line 5, it is not clear what is meant by "said pulse group type pulse groups" since the phrase appears redundant.

Claim 3, line 10, it is not clear what is meant by "read/resolves." Does it mean 'read or resolves', 'read and resolves', or 'read and/or resolves'?

Claim 3, line 85, it is not clear what is meant by "regularities/algorithms." See above.

With respect to claims 3-7, the phrases "other properties," "other packet properties" or its variations appear (see claim 3, lines 15, 29, 41, 88, 91, 99, 107, 117, 126, 136, 147 and 148; claim 4, lines 9 and 23; claim 5, line 8; claim 6, line 8; and claim 7, lines 6, 9, 12, 14, 24 and 25). It is not clear what is the scope of these phrases. How should "other properties" or "other

packet properties" be interpreted and evaluated such that skilled artisans would be informed of the proper scope of applicant's claimed subject matter. Is there a test to determine what is or is not a property? It is not evident from the specification how to determine what constitutes "other properties."

Claim 4, line 4, it is not clear what is meant by "reads/resolves."

Allowable Subject Matter

- 3. Claims 1-7 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
- 4. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fails to anticipate or make obvious the soliton transmission system and packet switching system, wherein in the claims, the term "optionally" is interpreted by the examiner to mean that the system performs the associated 'optional' functions by selecting the particular function under certain circumstances. If this interpretation is incorrect, applicant should clarify their intention as to how to interpret "optionally." This phrase appears in claim 2, lines 2, 9, 21 and 23; claim 3, lines 4, 25, 56, 71, 76, 82, 84, 92, 101, 105 and 146; claim 4, lines 19 and 26; claim 5, line 9; claim 6, line 11; and claim 7, lines 18 and 23. Aukia et al. (US 6,594,268 B1, column 3, lines 39-53) and Ofek et al. (US 6,778,536 B1, column 6, line 58 to column 7, line 20) teach the use of headers in received packets to establish actions for treating subsequent associated packets, but do not teach the optional functions in the claimed subject matter.

Also, in claim 1, line 3, the phrase ", such as laser light pulses," is interpreted as an example of "electromagnetic radiation pulses,' rather than as a further limitation of the claimed subject matter. If this interpretation is incorrect, applicant should clarify their intention.

In claim 3, lines 2-3 and 8, the phrase ", like the Internet," is interpreted as an example, rather than as a further limitation.

In claims 3, lines 16 and 17, and claim 4, lines 10 and 11, "said sample packet" and "said sampled packet" are interpreted to refer to the "certain percentage or certain number of packets."

In claim 3, line 59, the "for example" phrase is not interpreted as a further limitation.

In claims 4, 5, 6 and 7, lines 1-2, the phrase ", especially for wide area networks like the Internet," is interpreted as an example of a "packet based networks," rather than a further limitation.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melvin Marcelo whose telephone number is 571-272-3125. The examiner can normally be reached on Mon-Fri 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hassan Kizou can be reached on 571-272-3088. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
